

simple-plot 0.4.0 — Area-fill feature gallery

1 · ``fill:`` — solid fill below a curve to baseline

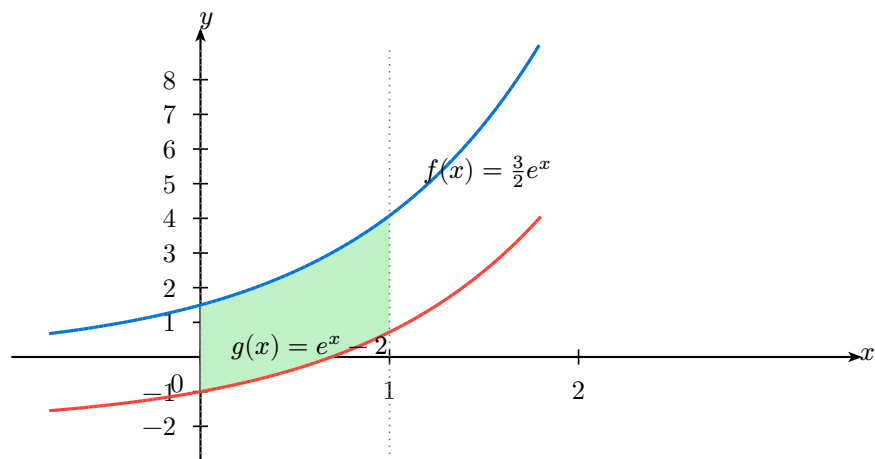

Fill $\sin(x)$ above x -axis (blue):

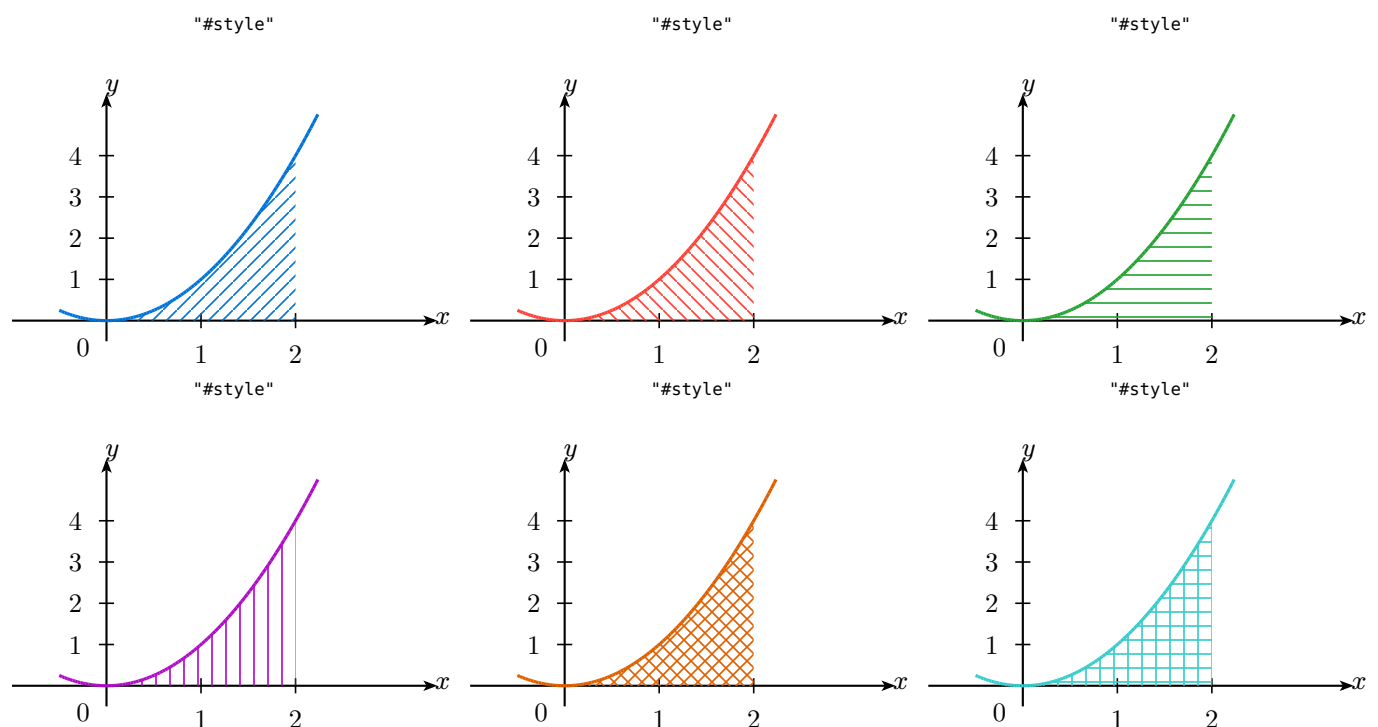

Fill between curve and baseline $y=0.5$ (orange):

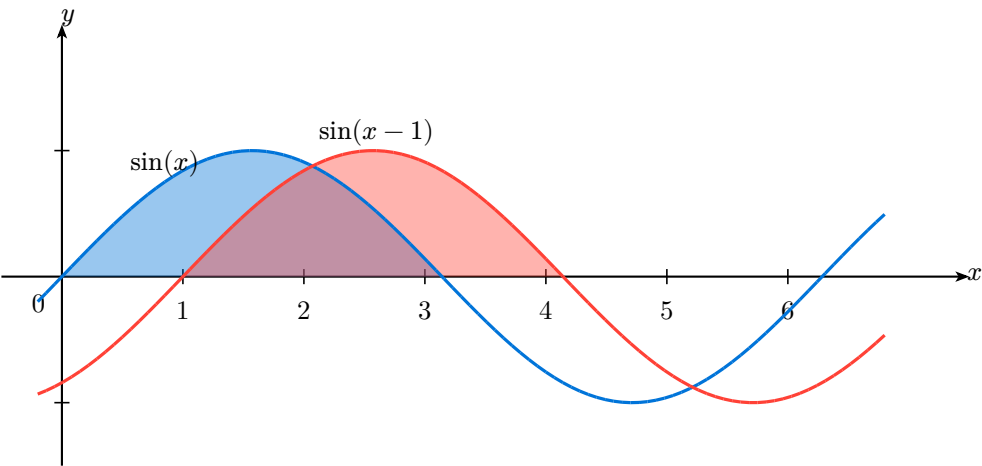

2 · ``fill-between:`` — solid color between two curves

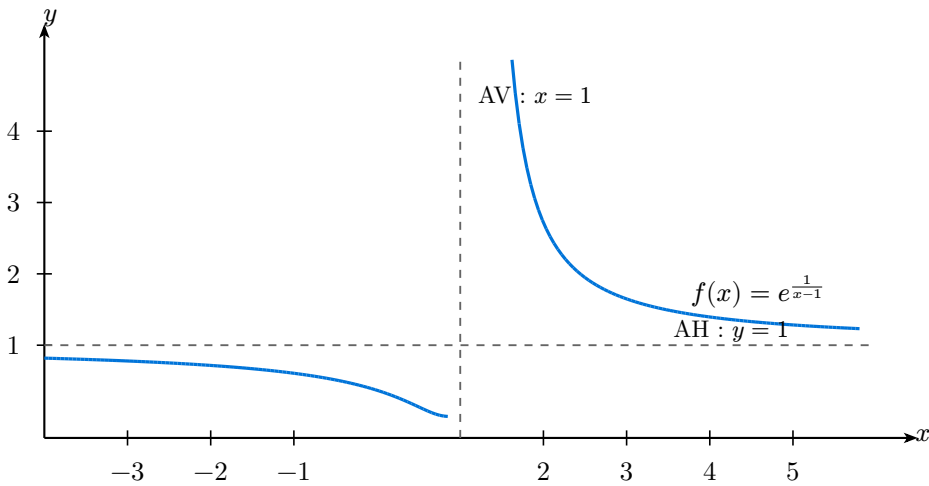

3 · Hatch pattern styles — ``"ne"``, ``"nw"``, ``"h"``, ``"v"``, ``"cross"``, ``"grid"``

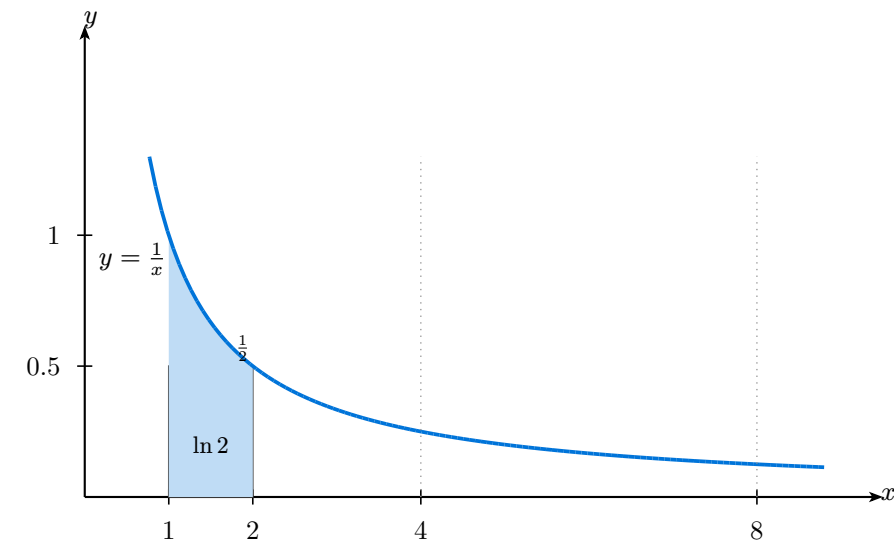

4 · Overlapping fills — two areas in different colors reveal intersection

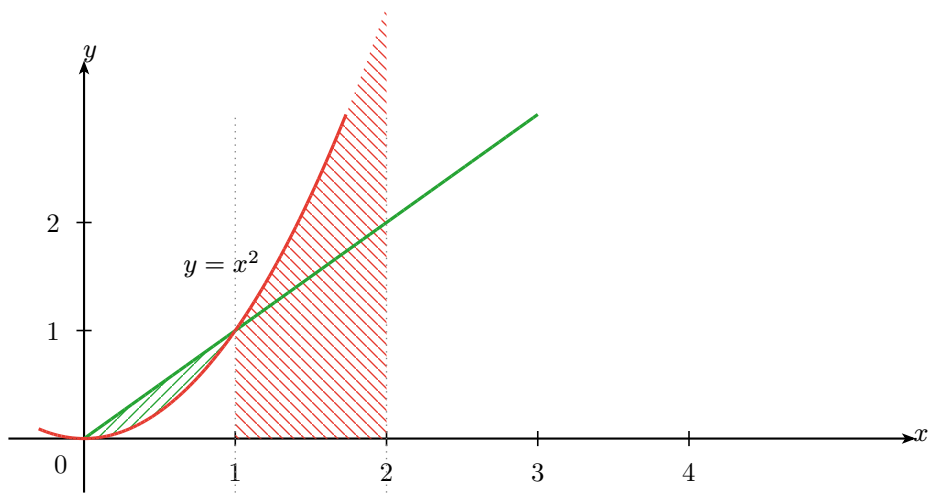

5 · ``annotation:``, ``vline:``, ``hline:`` — asymptote labelling

6 · Proof $\ln(2) > 1/2$ — ``riemann-sum`` (n=1, right) + ``fill-area``

7 · Hatched region + solid outline (tkz-fct style integral illustration)

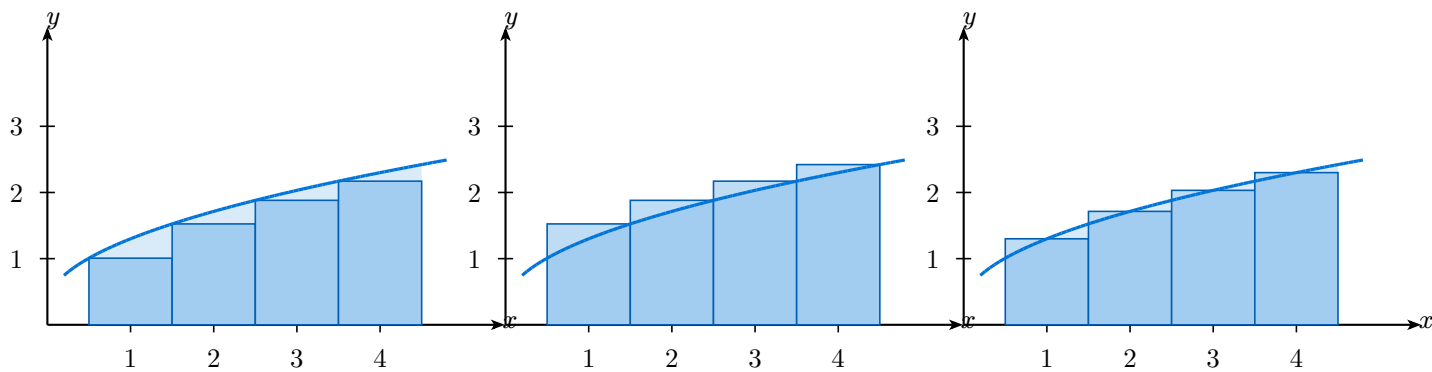

8 · `riemann-sum` — left, right, midpoint methods

Left (lower for f incr.)

Right (upper for f incr.)

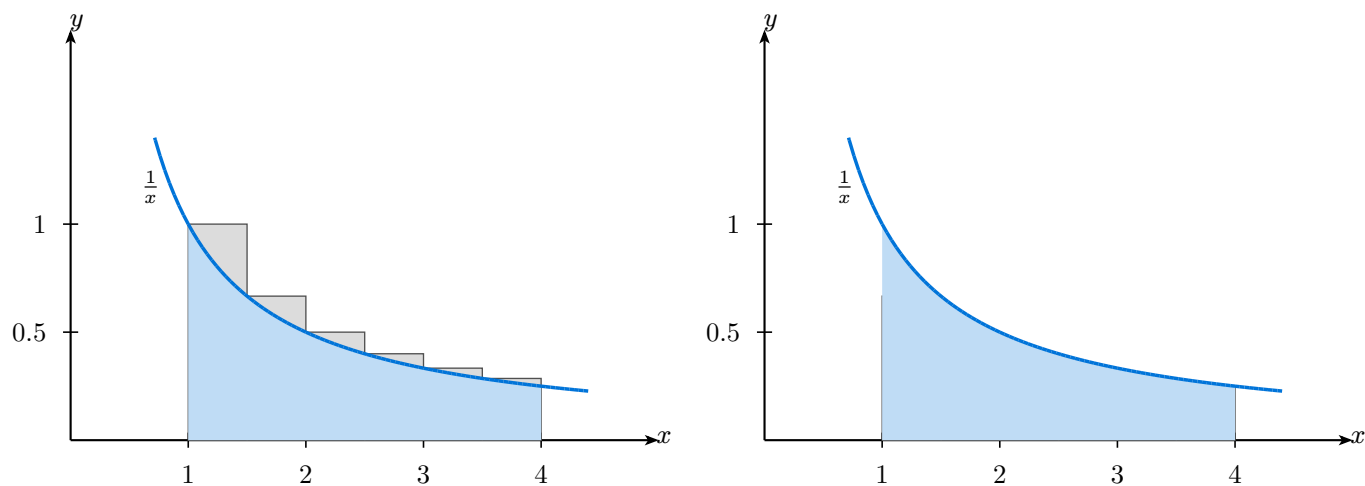

Midpoint

9 · Upper and lower Riemann sums for $1/x$ on $[1, 4]$

Left sum (upper bound, f decreasing)

Right sum (lower bound, f decreasing)

10 · Hatched Riemann sum + fill-area overlay
