

simple-plot — Riemann Sum Feature Gallery

1 · All five methods — `"left"`, `"right"`, `"mid"`, `"lower"`, `"upper"`

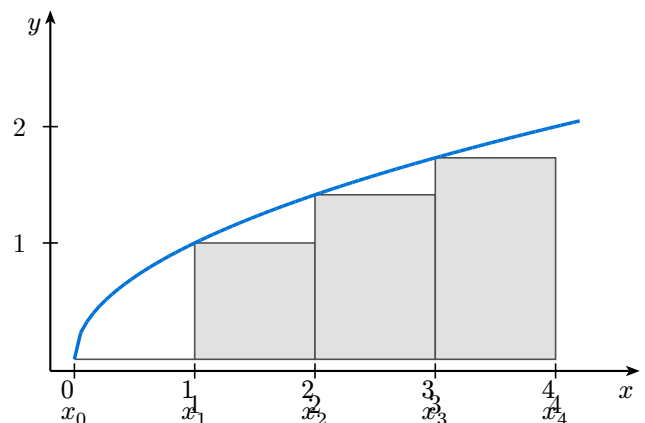

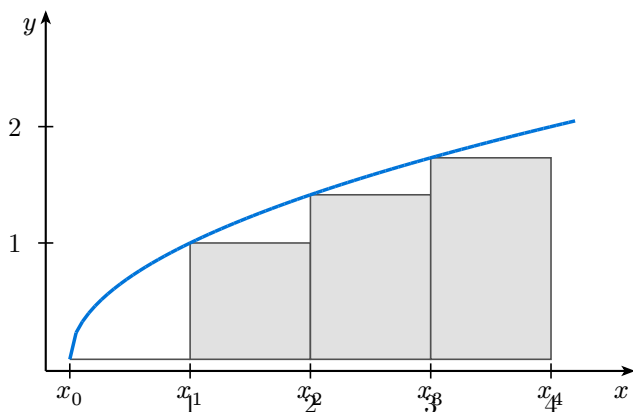

2 · Full annotation: `"show-points"`, `"show-dx"`, `"show-xi"` together

3 · `"show-xi: true"` + `"xi-show-values: true"` — numeric subdivision labels

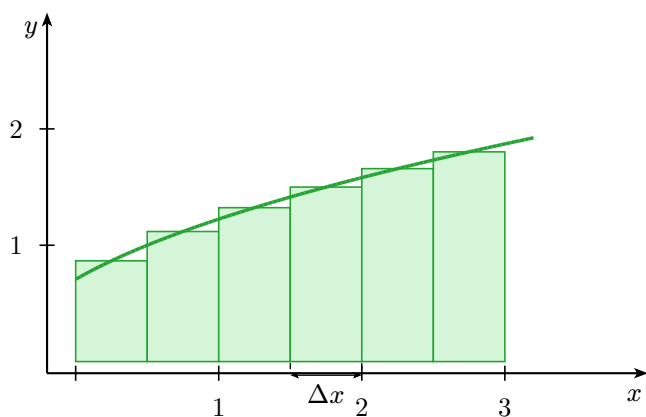

`xi-show-values: false` (default) — symbolic $x_0, x_1, l, \dots$

`xi-show-values: true` — actual x values shown

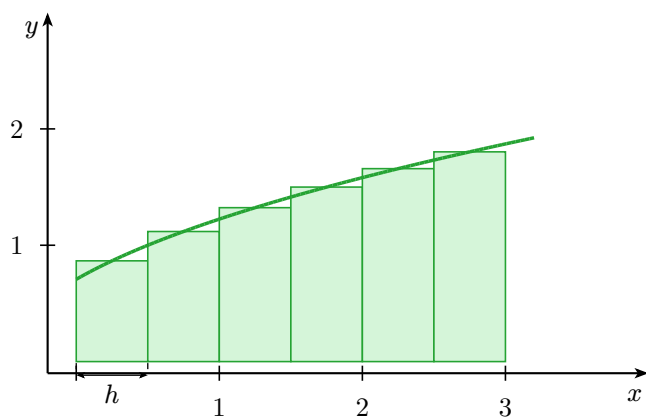

4 · ``show-dx`` — Δx dimension bracket, ``dx-rect`` selects which rectangle

`dx-rect: auto` (middle rectangle)

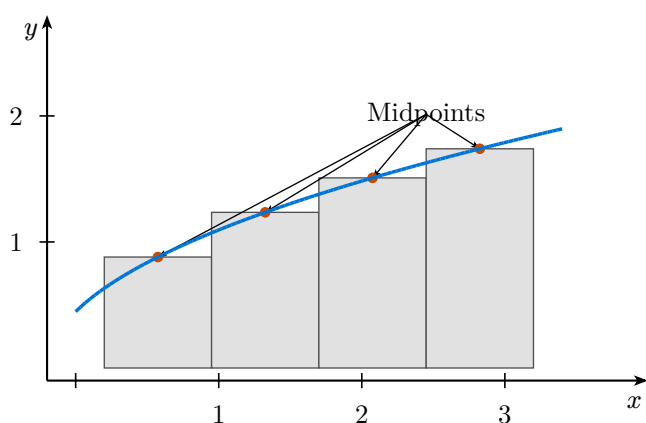

`dx-rect: 0` (first rectangle), custom `dx-label`

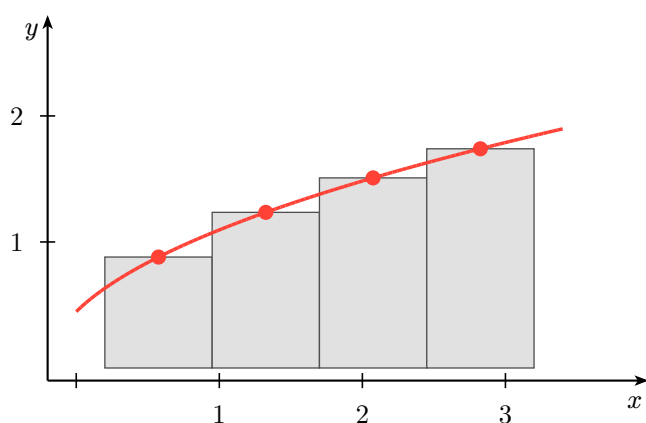

5 · ``show-points`` — evaluation dots; ``point-label`` and ``point-label-pos``

`point-label: auto` — auto arrow label

`point-label: none` — dots only, no label

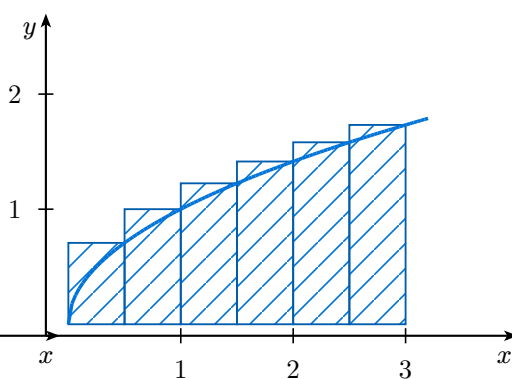

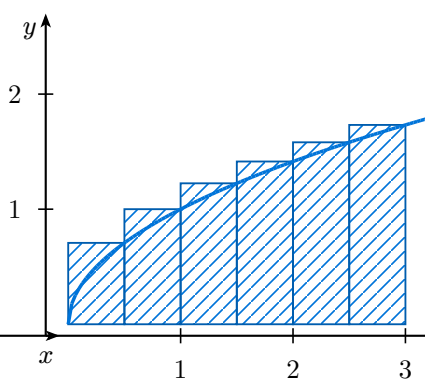

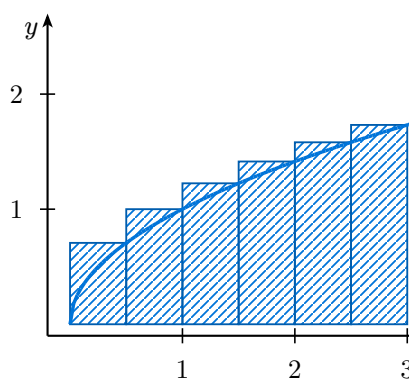

6 · Hatch controls: ``hatch-spacing`` and ``hatch-stroke`` on Riemann rectangles

`hatch-spacing: #label-txt`

`hatch-spacing: #label-txt`

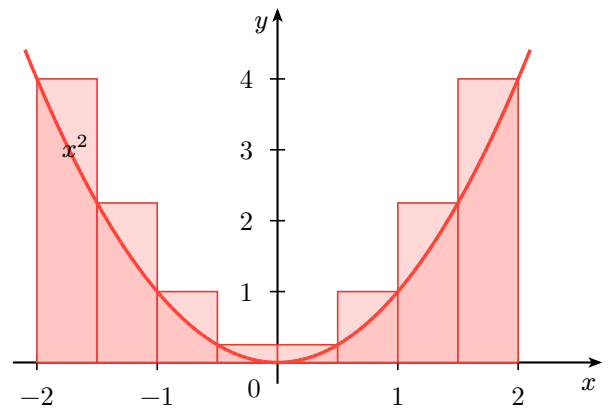

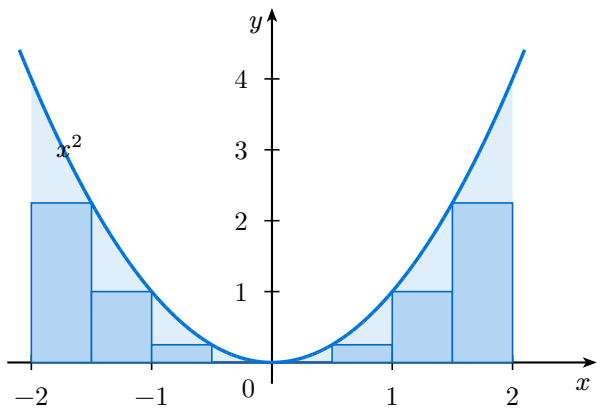

`hatch-spacing: #label-txt`

7 · ``"lower"`` and ``"upper"`` — true inf/sup; works for U-curves

`\`"lower"\`` — true minimum on each subinterval

`\`"upper"\`` — true maximum on each subinterval

8 · Pedagogical: right-sum approximation with all annotations enabled
